WT Docket No. 16-421

**COMMENTS SOUGHT ON STREAMLINING DEPLOYMENT OF SMALL CELL INFRASTRUCTURE
MOBILITIE, LLC PETITION FOR DECLARATORY RULING**

Dear Madam Secretary,

I am opposed to this ongoing proliferation of 5G technology at this time. There definitely has not been enough research on safety of this technology. The research done so far on rats and mice shows increase in tumors, cancer and DNA mutations. The FDA has banned certain drugs for above findings. Our doctors and scientists kind of dismiss Electromagnetic Hypersensitivity (EHS) syndrome (also known as “Microwave Sickness”). But I am around a sufferer. We can be somewhere and he says I can feel a cell phone tower in the area, he has been always correct. We do spot one, his radiation headaches are alleviated by eating ice cream quickly creating the dreaded brain freeze. This shows me there is inside heating of tissue just like a microwave cooks meat. So everything I have read about 5G includes Distributed Antenna System (DAS) towers which means many more towers to facilitate what? Smart cars, homes, phones, data faster on phones, to the gain of big business without proper environmental and health studies. Scientists overseas are concerned with 5G affecting pollinating insects (bees especially). If they quit pollinating which is happening we shortly won’t have any food for plants, then plant eating animals then us. Also we have a proven system that is safer and faster, fiber optics.

Next why the big push to get rid of landlines. During hurricanes only landlines were up and running as cell towers were knocked out. No power to recharge cell phones, or power to keep cell towers running. Lastly the push for 5G includes hanging these DAS boxes all over the place. When technology changes again who is responsible for all these boxes removal. At this time for above reasons I strongly ask you to reconsider pushing forward with 5G technology.

Sincerely yours,

Eddie Huck
